## SUMMARY

---

Full-Stack developer with 5+ years of experience delivering mobile and web applications. Primary mobile stack: Flutter and Firebase; expanding full-stack capabilities with Vue.js, TypeScript, Node.js and MongoDB. Proven ability to own features end-to-end — from Figma prototypes to production release, tests, and CI/CD. Comfortable as a sole mobile developer and as part of medium cross-functional teams.

## TECHNICAL SKILLS

---

**Languages:** TypeScript, JavaScript (ES6+), Dart

**Frontend:** Vue.js, HTML5, CSS3, SASS, TailwindCSS, responsive & accessible UI

**Mobile:** Flutter (production), WebView integration, platform channels, component libraries

**Backend & Cloud:** Node.js, Firebase Cloud Functions, REST APIs, MongoDB

**Databases:** Cloud Firestore, MongoDB (document modeling)

**Testing & CI:** Jest, Flutter unit & integration tests, GitHub Actions

**Deployment & Tools:** Firebase Hosting, Netlify/Vercel, Docker (basic), Git

**Design:** Figma — prototypes, component libraries, design tokens

## SELECTED WORK EXPERIENCE

---

Africhange — Software Engineer (Flutter Specialist)

Jun 2024 – Present

**Flutter • Firebase (Remote config, Analytics, Messaging) • third-party SDK**

- Mobile developer within a multi-discipline team (3 frontend, 6 backend, 4 QA, 1 security); implemented payment UI flows, integrated payment provider SDKs, and added robust client-side validation and error handling.

PayMeBlue — Mobile App (Lead Mobile Developer)

May 2023 – Present

**Flutter • Firebase (Firestore, Firebase messaging) • Cloud Functions (Node.js)**

- Sole mobile lead building both iOS & Android apps integrated with paymeblue.com; apps reached over 1,000+ downloads pre-launch.
- Designed and implemented a WebView event handling system with agnostic parsing and native callbacks to support programmatic file downloads, deep links (Google Maps), and app navigation outside the web context.
- Centralized complex backend logic into Firebase Cloud Functions (Node.js), improving security and reducing client-side complexity.
- Translated Figma prototypes into reusable component sets and design tokens for platform consistency.

## Goalspaces — Mobile Developer

Mar 2023 – May 2024

**Flutter • Firebase(Messaging) • Social Auth • Websockets**

- Sole mobile developer responsible for feature development and release cycles; collaborated closely with backend engineer and designers to implement onboarding flows and data sync.

## iRecharge — iRecharge 2.0 — Mobile Developer (Intern to Mobile Lead)

Apr 2021 – Nov 2023

**Flutter • Firebase • REST APIs**

- Began as an intern and advanced to core mobile developer; co-led a 2-person mobile effort to deliver iRecharge 2.0 while the engineering org grew from ~9–10 to ~18 developers.
- Rebuilt app architecture to improve modularity, testability, and release velocity; implemented offline caching and synchronization with MongoDB/REST APIs.
- Helped deliver a product that processes roughly 65,000,000 NGN per day; the Android app has 100,000+ downloads.
- Integrated remote electricity meter crediting with a major state power utility — enabling automated top-ups after payment and a first for Nigeria.

## NOTABLE PROJECTS

Poker app - Basic draws and Texas Hold'em

**Vue.js • JavaScript • Netlify**

- Built & deployed a responsive mock card game application; used

East Front Theatre - Accessibility hub

**NextJS • TypeScript • Netlify • GitHub Actions • GitHub Projects • Vitest • JSDocs**

- Built & deployed an accessibility-first website for a company using the NextJS frontend framework; Backend implemented with Wix (Headless Wix) for easy management by the client's non-technical team; Agile methodologies were used for delivery which was completed within 3 weeks;

## HOW I WORK

**Ownership:** own mobile codebase end-to-end (architecture, tests, CI, release).

**Design to Dev:** convert Figma prototypes to components and design tokens for consistency.

**Testing & CI:** unit & integration tests in Jest/Flutter; run in GitHub Actions; preview deploys for QA.

## EDUCATION

**Nova Scotia Community College • Fullstack Application Development**

**Covenant University • Computer Engineering • December 2020**
